Sustainability and Transformation Programme

5. Health commissioners and providers are required by NHS England to work together to develop STP plans which will integrate, update and streamline health and care provision. England is divided into 44 local STP 'footprints'.
6. The footprint for Cambridgeshire and Peterborough matches our Clinical Commissioning Group (CCG) area. Cambridgeshire and Peterborough Clinical Commissioning Group has worked with other organisations to establish a leadership model and work streams. The Cambridgeshire and Peterborough STP was published in November 2016 following an interim draft in June¹.
7. The STP projects vary across many topics, seeking to re-model and transform health and care services. There are over 50 projects grouped into themes. Each project reports to one of these Delivery Boards:
 - Urgent and Emergency Care
 - Women & Children
 - Elective Care
 - Primary Care & Integrated Neighbourhoods
 - Shared Services
 - Digital Delivery
 - Workforce & Organisational Development
8. Following work with the CCG and STP Delivery Unit on improving patient and public involvement in the STP the Health and Care Executive have approved the principles of:
 - Shifting from concept to delivery
 - Supporting patient and carer involvement to improve services and in delivering change
 - Supporting public engagement to develop priorities, strategies and plans
 - Using community engagement to identify needs and aspirations
9. Healthwatch Cambridgeshire is working with the STP Delivery Unit to identify which work streams have already involved patients and the public, and where assistance can be provided in developing approaches to engagement. We are well placed to identify patients and public who would like to engage with the STP delivery work. We are currently adapting Best Practice Guidance on Engagement and Consultation for STPs ², with permission from Healthwatch Kent.
